# Syllabus Formalized Mathematics in Lean (Computer-assisted Mathematics – V3A6 / F4A1). WiSe 25/26

**Instructors:**
**Floris van Doorn**, office *Endenicher Allee 62*, room **1.002**, vdoorn@math.uni-bonn.de
**Michael Rothgang**, office *Endenicher Allee 62*, room **1.001**, rothgang@math.uni-bonn.de

**Tutors:**
**Pablo Cageao Hunduvilla** , s96pcage@uni-bonn.de **(8 − 10)**
**Hannah Scholz**, scholz.hannah@uni-bonn.de **(10 − 12)**

**Class times**
Lecture on Tuesday 16 – 18 and Thursday 10 – 12 in the Zeichensaal
Exercise sessions in two groups on Monday 8 – 10 and 10 – 12 in N0.007.

**Office Hours**
There is a Lean hacking session every Thursday 14:15 – 16:00 in seminar room N0.008, which you can join to work on Lean exercises, projects or to ask questions. A personal meeting can be scheduled upon request.

**About the course**
In this course you will learn how to explain mathematical theories to a computer using a computer program called Lean. Using the language of Lean you can write mathematical definitions, theorems and proofs, and then Lean can check whether your proofs are correct and contain no holes. In this course we will learn how to interact with Lean and write your own proofs in it, and we will prove basic results in various mathematical topics, including algebra, topology and analysis. The course involves weekly homework exercises, a small and a large project, and a final written exam.

**Goals**

- Learn to explain mathematics to the computer program Lean

- Improve your understanding of mathematical proofs

- Learn some new mathematics

- Contribute to projects using Git

- Learn computer skills, such as using VSCode

- Personal project management skills

**Resources**

- The online textbook *Mathematics in Lean* by Jeremy Avigad and Patrick Massot

- Learning resources on the Lean website:
  https://leanprover-community.github.io/learn.html

**Registration**
Make sure to register for the course on eCampus. Register for the exam on Basis.

**Homework**
For a large part of the course, there will be a weekly set of homework problems assigned on Thursday. You have to hand-in the homework one week later on Thursday before class. A score of 60% of the homework grade is necessary to be admitted to the final exam.

**Projects**
You will be required to complete two projects as part of the course, the second of which will be graded.
The first project consists of contributing to an open source project, by formalizing the statement of an open conjecture in mathematics.
The second project consists of proving a small mathematical theorem or developing a bit of theory by yourself or with one partner. The second project will count for your final grade.
More information about the projects will be given during the course.

**Final Exam**
There will be a written final exam, which will be *closed-book and no laptop/electronics allowed.* This will test whether you know what you're doing when using Lean. No deep knowledge of nonstandard tactics or Mathlib will be required.

First exam time: Fr 20.02.2026 at 9 – 11 (GHS)
Second exam time: Sa 21.03.2026 at 9 – 11 (GHS)

**Grades**: To pass the course you have to get a passing grade on both the project and the final exam. Your final grade will be weighted as follows.

- Project 50%;

- Final exam 50%.

If you take the retake exam, your project still counts for 50% of your grade.

**Code of conduct and ombudspersons**:
Everyone attending this class will contribute to an inclusive and welcoming environment where we all treat each other professionally and with mutual respect, regardless of origin, beliefs, physical ability, gender or sexual identity. Discriminatory, racist, sexist, exclusionary, bullying, or harassing behavior will not be tolerated. In the event that you witness inappropriate behavior, please consider intervening if it is safe for you to do so and / or informing an ombudsperson. You might also consider contacting the victim and offering help.
The ombudspersons can be contacted at any time in the event of conflict between individuals, perceived misconduct, or any form of harassment. They are bound by secrecy.
The ombudsperson in mathematics is currently:
Dr. Regula Krapf (`krapf@math.uni-bonn.de`), Mathematical Institute
For more information, see
`https://www.mathematics.uni-bonn.de/en/department/fachgruppe-mathematik#fgombud`
